DETAILED ACTION

Information Disclosure Statement

1. The listing of references in the specification is not a proper information disclosure statement. 37 CFR 1.98(b) requires a list of all patents, publications, or other information submitted for consideration by the Office, and MPEP § 609 A(1) states, "the list may not be incorporated into the specification but must be submitted in a separate paper." Therefore, unless the references have been cited by the examiner on form PTO-892, they have not been considered.

Claim Objections

2. Claims 1-4, 7-12, 14, and 17-20 are objected to because of the following informalities: claims 1 & 11 are structurally incomplete, primarily because there is no relationship cited between the chain, the drag, and the direction of the weight vector. Claims 4 & 20 are sentence fragments and therefore add no limitations to the base claim. Appropriate correction is required.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Art Unit: 2841

3. Claims 1-4, 6, 7, 11-14, 16, and 17 are rejected under 35 U.S.C. 102(b) as being anticipated by Johnson et al. Johnson disclose a plurality of load cells to measure lifting force, and a plurality of load cells to measure frictional forces which are subtracted off the weight signal (Abs).

Claim Rejections - 35 USC § 103

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claims 8-10 and 18-20 are rejected under 35 U.S.C. 103(a) as being unpatentable over Johnson et al in view of Airesman and Lesesky et al. Johnson discloses the claimed invention except for the use of overload protection and the use of RF communications between the load cells and the controller. As for the overload protection for the load cells, it is old and well known to provide fork lift weigher with such protect as shown by the example of Airesman (Abs), and would have been an obvious modification to Johnson for the same reason.

Lesesky show that RF data communication between a load cell and a microprocessor controller on a vehicle is an art recognized functional equivalent to a data communications cable (Col. 9, lines 30-60) and it would have been obvious to substitute one for the other in the device of Johnson based on its art

Art Unit: 2841

recognized suitability for its intended use and to eliminate wires which might get tangled as the fork lift moves.

Conclusion

6. Claims 5 and 15 would be allowable if rewritten to overcome the objections set forth in this Office action and to include all of the limitations of the base claim and any intervening claims.
